
Hyphenation exception log

Barbara Beeton

This is the periodic update of the list of words that T_EX fails to hyphenate properly. The full list last appeared in *TUGboat* 16:1, starting on page 12, with updates in *TUGboat* 22:1/2, pp. 31–32; 23:3/4, pp. 247–248; 26:1, pp. 5–6; 29:2, p. 239; 31:3, p. 160; 33:1, pp. 5–6; 34:2, pp. 113–114; and 36:1, p. 5. The full list is included here. Owing to the length of the list, it has been subdivided into two parts: English words, and names and non-English words (including transliterations from Cyrillic and other non-Latin scripts) that occur in English texts.

This list is specific to the hyphenation patterns that appear in the original `hyphen.tex`, that is, the patterns for U.S. English. Regarding patterns for other languages, see below, “Hyphenation for languages other than U.S. English”.

In the list below, the first column gives results from plain T_EX’s `\showhyphens{...}`. The entries in the second column are suitable for inclusion in a `\hyphenation{...}` list.

In most instances, inflected forms are not shown for nouns and verbs; note that all forms must be specified in a `\hyphenation{...}` list if they occur in your document. The full list of exceptions, as a T_EX-readable file, appears in <http://mirror.ctan.org/info/digests/tugboat>. (It’s created automatically, and is available in the `hyphenex` subdirectory; see below.)

Thanks to all who have submitted entries to the list. Since some suggestions have demonstrated a lack of familiarity with the rules of the hyphenation algorithm, here is a short reminder of the relevant idiosyncrasies. Hyphens will not be inserted before the number of letters specified by `\lefthyphenmin`, nor after the number of letters specified by `\righthyphenmin`. For U.S. English, `\lefthyphenmin=2` and `\righthyphenmin=3`; thus no word shorter than five letters will be hyphenated. (For the details, see *The T_EXbook*, page 454.) This particular rule is violated in some of the words listed; however, if a word is hyphenated correctly by T_EX except for “missing” hyphens at the beginning or end, it has not been included here.

Some other permissible hyphens have been omitted for reasons of style or clarity. While this is at least partly a matter of personal taste, an author should think of the reader when deciding whether or not to permit just one more breakpoint in some obscure or confusing word. There really are times when a bit of rewriting is preferable.

One other warning: Some words can be more than one part of speech, depending on context, and have different hyphenations; for example, ‘analyses’ can be either a verb or a plural noun. If such a word appears in this list, hyphens are shown only for the portions of the word that would be hyphenated in the same way regardless of usage. These words are marked with a ‘*’; additional hyphenation points, if needed in your document, should be inserted with discretionary hyphens.

Words added since the last appearance of the list are preceded by ‘+’.

The reference used to check these hyphenations is *Webster’s Third New International Dictionary*, unabridged.

Hyphenation for languages other than U.S. English

Patterns now exist for many languages other than U.S. English, including languages using accented and non-Latin alphabets. CTAN holds an extensive collection of patterns: see [language/hyphenation](#) and its subdirectories.

A group of volunteers led by Mojca Miklavec have created a comprehensive package of hyphenation patterns, called `hyph-utf8`; see <http://tug.org/tex-hyphen>.

Converting this list into machine-usable hyphenation exceptions

Werner Lemberg has created scripts to convert this article into a machine-readable `\hyphenation` block that can be incorporated into a document either directly or by inputting a file. Many inflected forms will be included automatically, some evident in the printed version, but many included silently. Both shell and Perl versions of the script are available (for no particular reason), with identical behavior. Everything is available through CTAN at <http://mirror.ctan.org/info/digests/tugboat>.

The T_EX-usable output of the script is posted in the same area as `ushyphex.tex`.

The list — English words

academy(ies)	acad-e-my(ies)
ac-cusative	ac-cu-sa-tive
acronym	acro-nym
acry-lamide	acryl-amide
acry-lalde-hyde	acryl-alde-hyde
acupunc-ture(ist)	acu-punc-ture(-ist)
addable	add-a-ble
ad-di-ble	add-i-ble
adrenaline	adren-a-line
aerospace	aero-space

af-terthought	af-ter-thought	bankrupt(s, cy, cies)	bank-rupt(s,-cy,-cies)
agronomist	agron-o-mist	ba-ronies	bar-onies
